

Leverage AI to Increase Productivity and Meet Growing Patient Needs

Patients and regulators have high expectations for complaint handling and effective quality event management of pharmaceuticals, medical devices and other life science products. With ever-increasing volumes of quality records and growing product, process and supply chain complexity, quality teams are pressed to stay on top of critical issues and consistently make the right decisions, efficiently and effectively. By leveraging innovations in digital quality, organizations can uncover new insights from today's quality data.

QualityWise.ai provides powerful, AI-assisted workflows to automatically suggest categories and correlate complaints and quality events, unlocking the value of quality data and augmenting decisions made by quality teams. With AI Insights, QualityWise.ai provides a robust solution to decrease cycle-times, speed up response times and deliver on customer expectations.

Greater Productivity and Effectiveness

Gain productivity and effectiveness by quickly identifying all related events, regardless of business unit or location.

Better Decision Making

Ensure the decisions by quality personnel are made efficiently, with the maximum amount of relevant data, and without duplication of efforts.

Reduce Remediation Costs

Identify common root causes across multiple locations and eliminate redundant CAPAs, nonconformances and more.

Ensure Regulatory Compliance

Minimize errors, compliance risk and associated regulatory action.

AI Insights

Autocorrelation of Related Quality Events

Investigations involve highly complex processes and expert knowledge. Disparate data and low visibility of relevant information across a typically document-based system makes investigations difficult and time consuming.

AI Insights rapidly searches through all available current and historical data to find related quality events, instantaneously allowing quality teams to gain efficiency and a fuller picture of the overall presence of a quality event. TrackWise Digital and QualityWise.ai speeds up investigations by helping quality teams identify correlations, trends and patterns that were previously invisible across related events to avoid duplicate investigations of complaints and quality events, including out of specifications, deviations nonconformances and CAPAs.

Reduced Cost of Failure

Leverage AI Insights to identify related quality events and avoid repeating the same investigation multiple times, reducing the Cost of Failure and the overall Total Cost of Quality.

Adverse Trend Identification

Improve current adverse trend identification processes by holistically capturing all related events, ensuring all decisions by quality personnel are made with the maximum amount of relevant data.

Quality Correlation

Efficiently and effectively connect disparate items of quality data, including complaints, out of specifications, deviations, nonconformances and CAPAs, that are often integrally linked by cause and effect.

Shared Quality

Ensure there is visibility of outcomes of quality events throughout the organization, regardless of the business unit or location, to improve efficiency and effectiveness of investigations and other quality activities.

Achieve Proactive Quality with QualityWise.ai

QualityWise.ai is the world's first AI-enabled platform designed to augment quality management decision making. The TrackWise Digital QualityWise.ai solutions are purpose built for quality management and support the use of GxP compliant data for regulated industries.
